

Handy Calibrators

CA51/CA71

- Source and measure operations can be performed at the same time.
(Select from the following source signal and measurement signal options: voltage, current, resistance, thermocouple (TC), resistance temperature detector (RTD), frequency, pulse).
- AC voltages, including supply voltage, can be measured.
- Includes a wide array of additional functions.
- Easy operation.
- Compact size and Lightweight

Handy Calibrators

Comprehensive source/measure instruments for all your calibration and equipment checking needs at maintenance sites

Sensors and instruments require a wide variety of operation checks in the field. The CA71 Handy Calibrator is a small, lightweight, multifunction calibrator that can simultaneously source and measure voltage, current, resistance, TC, RTD, frequency, and pulse signals. The CA51 Handy Calibrator is a basic model with the same functions as the CA71 except TC and RTD measurement functions and online communication functions.

Simultaneous signal source and measurement capability

The CA71 lets you handle regular tests on TCs, RTDs and various other types of sensors and instruments, as well as operation checks when a problem has occurred. By itself it can source signals for input to equipment, and check output signal from equipment. With the CA71, you don't need to worry about synchronizing operations with other setting devices. (TC and RTD measurement functions are CA71 only.)

AC voltage (including supply voltage) measurement capability

In cases where numerous signal converters and other devices are mounted on a rack or panel, the Handy Calibrator can be used to check the input and output signals of each device, while simultaneously checking the power supply. There is no need for a separate multimeter to measure supply voltage.

A wide array of useful functions

• Source

Values set in steps of 4–20 mA
24V DC Power Supply to Transmitter

• Divided output (n/m) function

Output settings are divided, eliminating the need for bothersome calculations for percentage output.

• Autostep function

Changes the output value in step form based on the setting from the divided output (n/m) function. Changes can be sourced automatically every 10% or 25%.

• Online communication (CA71 only)

RS-232C-compliant optically isolated interface

• Sweep function

Linearly increases or decrease the output. The increasing/decreasing time can be set to either 16 or 32 seconds.

• Memory function

Source values and measurements forming individual value sets can be saved to or read from the Handy Calibrator's internal memory (maximum 50 value sets).

• Temperature monitor function

Easy operation

The Handy Calibrator incorporates rotary switches for simple handling. Just open the carrying case cover and connect the cables, and you're ready to take measurements.

Panel layout

1. Measurement range setting rotary switch
Select from the following:

- AC voltage
- DC voltage
- TC^(*)
- Resistance
- RTD^(*)
- Frequency pulse
- DC current

*1: Only for CA71

2. Terminal adapter 99021^{(*)2}

Measurement input terminals
*2: Not used on CA51.

3. Output terminals for signal generation

4. Signal generation range setting rotary switch
Select from the following:

- DC voltage
- TC
- Resistance
- RTD
- Frequency pulse
- DC current

5. POWER key

6. Various function settings

- Up/Down keys for generated signal setting
- Divided output (n/m) function
- Memory function

7. LIGHT key
Turns on the LCD backlight.

8. TEMP key
Enables temperature monitoring.

● Spare parts

Product	Source signal lead cable	Measurement lead cable	Carrying case	Terminal adapter	Fuse
Model	98020	RD031	93016	99021	A1501EF
Remarks	One set, including one red cable and two black cables. Length: approximately 1.7 meters	One set, including one red cable and one black cable. Length: approximately 1.0 meter	The carrying case can hold the source signal and measurement lead cables, terminal adapter, four spare batteries, fuses, AC adapter, and user's manual.	Used in temperature measurement (for CA71).	For current terminal input protection. (10pcs/set)

K, E, J, T, N, R, S, and B may be switched to IPTS-68 through internal settings (DIP switch) (L and U are not switched).

*5: Frequency (interval between one pulse and another) and amplitude during pulse cycle generation may have the same range as during frequency generation.

General specifications (for both CA51 and CA71)

Parameter	Specification
Signal generating unit response time	Approximately 1 second (time between start of voltage change and when voltage enters accuracy range)
Signal generating unit voltage limiter	Approximately 32 V
Signal generating unit current limiter	Approximately 25 mA
Divided output (n/m) function	Output = setting $\times (n/m)$ n = 0~m; m = 1~19; n \leq m
Auto-step output function	n value sent automatically when n/m function selection is selected (two options: approximately 2.5 seconds/step or approximately 5 seconds/step)
Sweep function	Sweep time (two options: approximately 16 seconds or approximately 32 seconds)
Memory function	50 value sets (generated and measured values are stored as value sets with the same address (up to 50 value sets can be stored))
Measuring unit maximum input	Voltage terminal: 300 V AC Current terminal: 120 mA DC
Current terminal input protection	Fuses: 125 mA/250 V
Measuring unit ground voltage	Maximum 300 V AC
Measurement display updating rate	Approximately once per second
Serial interface	Enabled when communication cable (RS232) is connected; sold separately as optional accessory (CA71 only)
Display	Segmented LCD (approximately 76 mm \times 48 mm)
Backlight	LED backlight; auto-off after one minute (from when LIGHT key is turned on)
Power supply	Four AA alkaline batteries, or special AC adapter (sold separately)
Battery life	Measurement off, output 5 V DC/10 k Ω or greater: Approximately 40 hours Simultaneous signal generation/measurement, output 5 V DC/10 k Ω or greater: Approximately 20 hours Simultaneous signal generation/measurement, output 20 mA/5 V: Approximately 12 hours (using alkaline batteries, with backlight off)
Consumed power	Approximately 7 VA (using 100 V AC adapter)
Auto-power-off function	Approximately 10 minutes (auto-power-off can be disabled through a DIP switch setting)
Applicable standards	IEC61010-1, IEC61010-2-31 EN61326-1:1997 + A1:1998 EN55011:1998, Class B, Group 1
Insulation resistance	Across input terminal and output terminal, 500 V DC, 50 M Ω or greater
